Thank you for shopping in our store. The Article Haunted House 3D Digital Pinball Machine 12 in 1 Arcade Cabinet Toyshock 77000 is on sale from Monday, December 2, 2019. This item is in the CollectablesArcade category, Jukeboxes & PinballPinballReplacement Parts. The seller is ripsey23 and is located in San Jose, CA. This article can be shipped to United States, Canada, United Kingdom, Denmark, Romania, Slovakia, Bulgaria, Czech Republic, Finland, Hungary, Latvia, Lithuania, Malta, Estonia, Australia, Greece, Portugal, Cyprus, Slovenia, Japan, China, Sweden, South Korea, Indonesia, South Africa, Thailand, Belgium, France, Hong Kong, Ireland, Netherlands, Poland, Spain, Italy, Germany, Austria, Bahamas, Mexico, New Zealand, Switzerland, Norway, Ukraine, Croatia, Chile, Colombia, Costa Rica, Panama, Trinidad and Tobago, Guatemala, Honduras, Jamaica, Bolivia, Liechtenstein, Luxembourg, Oman, EAN: 07445003269284 MPN: 77000 Mounted Product Dimensions (L x W x H): 51.00 x 30.00 x 17.00 inches of product weight mounted: 51.00 x 30.00 x 17.00 inches of mounted product weight: 64.34 pounds Manufacturer Part number : 77000 Brand: Toyshock Color: Green Manufacturer: Toyshock Model: 77000 UPC: 744759981998 ©2020 Walmart Stores, Inc. Pinball machines are wonderful and a ton of fun, but they are also huge, electromechanical beasts that require constant maintenance. Virtual pinball, playing pinball video games on a monitor powered at an angle, seems to offer some benefits, even if it's not the same, but these are also big and not cheap, either. So as an apartment dweller, seeing a company throw a virtual pinball table for less than \$500 surprised me. Let's see how it goes! The Toyshock 21C Digital Haunted House & Black Hole 12-in-1 3D Pinball Machine First off: I'm not a seller, but I feel like you have to give your product a shorter name. The Toyshock is a 3/4-scale arcade machine; this makes it comparable to standing booths sold by Arcade1up (I've taken a look at your cocktail table cupboard before), at least on paper. The monitor is 24, surrounded by a gray bezel that is ugly at best, and the back box has only alphanumeric panels; there is no DMD, and the game in the back glass is always Haunted House. I find these commitments acceptable for size; the bezel looks horrible in the pictures, but in person it's not too bad. The quality of building the machine feels great, and I can lean on it without moving, even though it is clearly built for the kids. My suspicion is that the bezel went silver as a wrong attempt to make it look like a locking bar and side railings. It doesn't work. I will not lie to you: this machine is less than one real pinball. However, I had a lot more fun playing standing. My hope is that some kind of enthusiastic community (or Toyshock themselves?) will make longer legs available; but I recognize that, as an adult, I am not the demographics for this. I love the art of the haunted house. But that 21C Digital logo isn't really good looking; Of course, I feel the same way about the Arcade1up logo, so maybe I'm just a grumpy old lady. Get off my lawn! As for games The 24 monitor has pretty good viewing angles; playing while sitting or standing are possible. The software is clearly based on the Android version of The Pinball Arcade from Farsight Studios, and although I have only played the PC version on a much beefier machine, the graphics and everything are represented well. A key exception is sound; if it's the board or the speakers, the sound quality is terrible. I hope it's the speakers; at least they can be replaced. I have no idea who decided to mark this device as 3D, however. There is no 3D effect; Certainly Nintendo 3DS style 3D free glasses wouldn't work at this size anyway. And as you can see in the Bonebusters, Inc. game shot earlier, it can actually be quite difficult to tell what is solid and what is the level of playing field in some of the most graphically intense games. This is mainly just a problem with Bonebusters, Inc. and El Dorado: Golden City. Playing The Pinball Arcade games is a solid piece of software. But this is a virtual digital pinball machine, and a cheap one at that. This means that if you are waiting for the instant response when pressing a button, you may be disappointed, as many people I have seen checking this machine have been. Personally, I'm fine playing Alien Crush (my personal favorite console pinball game) on a flat screen, and similarly, I don't really have any delay issues that prevent me from playing these games. I would rather play on it than TPA on my game PC. But for some people who are more sensitive to delay, you're going to want something more meat, or just spring for a real machine. Input lag aside, games are mostly delay-free (which a few exceptions in Goin' Nuts), and physics are fine, though ball collisions during multi-ball feel a little off. All games are nice for me to play, at least. The plunger is fine, it's not great, but you realize how far you've pulled and I can do some skill shots over and over again. One thing I really like is the inclusion of electromechanical games. These look and sound great, and don't require the extra glow that this machine probably doesn't have the power to. You can hear the ball rolling on wood, solenoids buzzing when holding a flin, and it sounds great even on the terrible speakers. Back-to-back glass screens work in all games, to varying degrees of success. As you can see above, 1812 class works fine. In other cases, such as Lights, Camera, Action!, the game resorts to a HUD floating on the playing field. (And there is no equivalent to illuminate; why include this game if you can't do the shooting?) They try to show at least part of the screen in the rear glass, but mostly it just looks broken. My Verdict on Individual Titles: Haunted Haunted Black Hole, Victory, Class of 1812, TX Sector, and all electromechanical games (Big Shot, Centigrade 37, and Jacks Open) play very well. Goin' Nuts has performance issues, and Lights, Camera, Action plays well except for the shooting. The latter two, El Dorado: City of Gold and Bonebusters, Inc. play well but suffer from poor visual distinction. The verdict here is that the Toyshock is a fun toy. That's what it was headed to, so I guess it works. Kids who are really on pinball will probably enjoy it. But can you enjoy peripheral demographic success as the Arcade1ups look like? As for nostalgic adults, I must say, although I love gottliebs, they're certainly not nearly as popular as Bally/Williams boards are. (Although that's probably just a Farsight factor having lost the licenses to those) I love the win, of course, but I imagine getting high speed. True pinball enthusiasts will be unhappy with anything less than a real machine; but even virtual pinball enthusiasts would probably prefer to build a mini pinball themselves to get pinball FX3-style high-end tables, or at least a screen for rear glass and to play dot matrix display games. It really feels like they decided to make a particular product for me; someone who likes the titles of Gottlieb 80 and EM, is happy with the emulation of The Pinball Arcade, lives in a small apartment, and really likes the clicky buttons. So it was very nice of Toyshock to do.
